## DETAILED ACTION

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-8 are rejected under 35 U.S.C. 102(e) as being anticipated by **Postlewaite et al.** (US 5,854,891).

**Postlewaite et al.** teach:

An on-line purchase and load (OPAL) server for performing a transaction over a network using a virtual smart card, said OPAL server comprising:

a virtual smart card database (2) having a plurality of records (data), each record including a virtual card identifier and a balance corresponding to a single virtual smart card;  
a hardware security module (100);

Art Unit: 3628

a smart card emulator that receives smart card commands and processes said commands in conjunction with said virtual smart card database and said hardware security module (col.2, line 57-col.3, line 67);

a pseudo card reader module that receives said smart card commands and relays said commands to said smart card emulator, whereby said OPAL server performs a transaction over said network using one of said records in said virtual smart card database (col.2, line 57-col.3, line 67; col.4, line 46-col.5, line 15);

a user verification module that verifies a user accessing said OPAL server and generates a user identifier, said user identifier being suitable to identify one of said virtual smart card records in said card database (col.2, line 57-col.3, line 67; col.4, line 46-col.5, line 63);and

wherein said smart card emulator and said pseudo card reader module are implemented as a single software module (NVM).

### *Response to Arguments*

3. Applicant's arguments with respect to claims 1-8 have been considered but are moot in view of the new ground(s) of rejection
